

Qualtrics Programming Services August 2020

As availability allows, Odum Institute staff may be hired to program Qualtrics surveys for UNC projects.

The fee for this service is \$500 and includes the first 10 hours of programming time. Additional hours will be billed at \$50 per hour.

The details and timeline of your project will be determined by discussion with your programmer, including whether the project is expected to require more than 10 hours of programming time.

By sending your internal billing information (UNC Chartfield String), you are authorizing a one-time charge of \$500, and agreeing that additional hours may be billed to that account at \$50 per hour. Your programmer will notify you if/when additional hours will be required.

We look forward to assisting with your project.
